OLTD 505 Course Learning Outcomes:

Through course activities, online discussions, readings, and activities, it is expected that students will:

- Demonstrate familiarity with common terms, definitions, and elements related to OERs and, more generally, open education.
- Demonstrate knowledge of the history and foundations of open education, including conflicting viewpoints around the ownership of knowledge, copyright, and copyleft licenses.
- Identify, critically assess, and evaluate existing OERs, OER platforms, and repositories.
- Examine current research around best and emerging practices in OER design, development, and implementation.
- Articulate a summary of personal learning in the course in a multimedia, online format.
- Share course-related learning with members of the course and greater educational community.
- Support the learning of classmates through discussion postings, blog comments, and social sharing activities.
